SP416	Sociology of Organizations	8	2	0	0	3	6

Prerequisites	
Admission Requirements	

Language of Instruction	French
Course Type	Elective
Course Level	Bachelor Degree
Objective	The course of the sociology of organizations aims, above all, to understand the logic of collective action within organizations. We will emphasize essentially the study of bureaucratic systems, their functioning and dysfunctions through the way people are able to play the game of conflict or cooperation.
Content	We will approach the subject from a perspective of strategic analysis that focuses principally on the power relationships within organizations. Based on the idea that there is no social systems fully resolved or controlled, and that individual or collective actors who compose them can never be reduced to abstract and disembodied functions, strategic analysis rejects any notion of structural and social determinism. Following the idea that the analysis of organizations in this way can make a decisive contribution to the formation of a new way of thinking on human affairs, we will try to extend the theory to the study, not only of organizations, but more generally of "situations" characterized by relations of power within systemic constraints. For every organization is primarily a subset of society in which it is placed, we will finally attempt of release in a broader perspective, the correlative relationship between the social whole and the organization.
