Course Code	Course Name	Semester	Theory	Practice	Lab	Credit	ECTS
ISI 542	Internet of Things and Industry 4.0	1	3	0	0	3	6

Prerequisites	
Admission Requirements	

Language of Instruction	English
Course Type	Elective
Course Level	Masters Degree

Objective	<ul style="list-style-type: none"> <li>• Presents the basic principles of "Wireless Communication" from an academic and engineering perspective.</li> <li>• It conceptually and analytically reveals the differences and similarities between the Internet of Things and its predecessor technologies (WSN, M2M, CPS).</li> <li>• It aims to convey Internet of Things design principles from an application perspective.</li> <li>• It conveys the engineering trade-offs behind the approaches that provide the Internet of Things technological infrastructure.</li> <li>• It provides the necessary opportunities for students to internalize the concepts and experimental methods presented in the course through multi-stage projects and assignments.</li> </ul>

**Theory Topics**

<b>Week</b>	<b>Weekly Contents</b>
1	Introduction to the concept of Internet of Things. Possible application areas. Understanding domain-specific requirements and design criteria.
2	Comparison of Internet of Things and traditional networks: Energy awareness and application addiction
3	Node Features: node hardware, Operating systems, detection modes
4	Self-structuring, topology control and repositioning
5	Network architecture design for the Internet of Things
6	Multiple access layer in Internet of Things systems, Routing approaches
7	Node management framework approaches
8	Midterm
9	Positioning and Time coordination techniques
10	Standards and open source software in the Internet of Things
11	Performance evaluation of IoT-based systems through simulation experiments
12	Industrial case study
13	Advanced topics: E-health applications
14	Advanced topics: Industry 4.0
