G561	Financial Analysis	1	3	0	0	3	6

Prerequisites	
Admission Requirements	

Language of Instruction	Turkish
Course Type	Compulsory
Course Level	Masters Degree
Objective	This course, which is aimed at Master of Business Administration students, has two main purposes. The first of these is to teach financial analysis topics and the other is to analyze scientific research and publications in this field. Within the scope of this course, students are provided with information on how to read financial statements. In addition, in the context of financial statement analysis, evaluation processes used to analyze the ability of businesses to fulfill their obligations, financial structures, financial performance and profitability, and to determine the suitability of their financial situations for investment, as well as financial analysis and control issues are taught. Scientific research and publications in the field of financial analysis are analyzed and students' research knowledge and skills in this field are developed.
Content	<p>After equity analysis by ratios, cash flow analysis, short-term solvency analysis, profitability analysis and market ratios as part of financial statements and financial analysis techniques are examined.</p> <p>Prediction of financial failure: The Altman Z-score model is examined. In the analysis of fraud indicators, the Beneish model and other analyses are considered.</p> <p>Capital structure and long-term solvency are analysed, as well as the analysis of the impact per share on capital financing decisions and capital decisions.</p> <p>Pro forma financial statements are prepared for financial forecasting.</p> <p>Methods for determining business value are examined.</p> <p>Emphasis is placed on the issues to be considered in inflation-adjusted financial statements as well as the importance of industry differences in the analyses.</p>
