Prerequisites	
Admission Requirements	

Language of Instruction	English
Course Type	Compulsory
Course Level	Masters Degree
Objective	Probability theory is one of the most important techniques used in data processing. The aim of this course is to provide the student with some the necessary background of the probability theory for data science and related statistical applications.
Content	Conditional probability; Bayes theorem; The course includes distribution functions, binomial, geometric, hypergeometric, and Poisson distributions, uniform, exponential, normal, gamma and beta distributions; joint distributions; Chebyshev inequality; central limit theorem. Introduction to Markov chains.
