Course Code	Course Name	Semester	Theory	Practice	Lab	Credit	ECTS
INF324	Database Design and Applications	5	2	0	2	3	5
Prerequisites							
Admission Requirements							
Language of Instruction	French						
Course Type	Compulsory						
Course Level	Bachelor Degree						
Objective	<p>The objective of this course is to present an overview of the principles and the current techniques in relational databases subject. The course focuses on the modeling of data and the desing of a database in the context of DBMS SQL Server 2008</p> <p>Another secondary objective of the course is the development of student autonomy in the use of database management system. This is a reflection of the reality of the labor market data and student are encouraged to respond positively to seeing the opportunity to enhance their knowledge of the DBMS.</p>						
Content	<p>Introduction, properties and classification of DBMS, fundamental concepts Entity-relationship model: entity, association and attribute Relational model, normalization of a relationship Functional dependencies and normal forms Integrity constraints Relational Algebra Query Language: SQL SQL -- Simple Queries SQL -- Aggregate and complex queries Query Optimisation Indexing Triggers and Stored Procedures Transaction Management Isolation Levels</p>

Theory Topics

Week	Weekly Contents
1	Introduction, properties and classification of DBMS, fundamental concepts
2	Entity-relationship model: entity, association and attribute
3	Relational model, normalization of a relationship
4	Functional dependencies and normal forms
5	Integrity constraints
6	Relational Algebra
7	Query Language: SQL
8	SQL -- Simple Queries
9	SQL -- Aggregate and complex queries
10	Query Optimisation
11	Indexing
12	Triggers and Stored Procedures
13	Transaction Management

Week

14 Isolation Levels
