

Course Code	Course Name	Semester	Theory	Practice	Lab	Credit	ECTS
INF481	Software Engineering and Object Oriented Design	8	4	0	0	4	5
Prerequisites							
Admission Requirements							
Language of Instruction	French						
Course Type	Compulsory						
Course Level	Bachelor Degree						
Objective	<p>In this course, tools and techniques that can be used in object oriented design process are introduced and students are given the experience of applying them. These tools help design both visually and textually. Students gain the ability to use methods and tools that can increase productivity in any process that can be encountered in the life cycle of a software project. Students learn the place of software engineering in computer engineering. They understand the necessity of software design and then object oriented design. They can use UML, a visual design language accepted as world standard. They can design different software problems using UML language. Students will be able to describe the software development process and life cycle in detail and compare the software development processes used in the market. They can test the developed software and calculate its expected cost/effort.</p>						
Content	<ol style="list-style-type: none"> <li>1. Introduction to software engineering and design, software demand analysis – 1</li> <li>2. Software want analysis – 2, software design – 1</li> <li>3. Software design – 2, software design – 3</li> <li>4. Software design principles - 1, software design principles - 2</li> <li>5. Software architectures</li> <li>6. Design patterns</li> <li>7. Design patterns, conceptual design presentations</li> <li>8. UML class examples</li> <li>9. Midterm exam</li> <li>10. Software development models, agile software development methods</li> <li>11. Software testing techniques</li> <li>13. Estimating in software projects</li> <li>14. Software quality</li> <li>15. Term project presentations</li> </ol>

## Theory Topics

Week	Weekly Contents
1	Introduction to software engineering and design
2	Software requirement analysis
3	Software design
4	Software design principles
5	Software architectures
6	Design patterns
7	Conceptual design presentations
8	UML class examples
9	Midterm
10	Software development models
11	agile software development methods
12	Software testing techniques
13	Software quality
14	Term project presentations
