Course Code	Course Name	Semester	Theory	Practice	Lab	Credit	ECTS
G112	Mathematics II	2	4	0	0	4	6

Prerequisites	G111
Admission Requirements	G111

Language of Instruction	Turkish
Course Type	Compulsory
Course Level	Bachelor Degree

Objective	The course comprises two basic parts; linear algebra and differential calculus with multi variables functions. The objective of the first part is to recall to the student elementary linear algebra necessary for the comprehension of the second part as well as to follow other similar courses. The objective of the second part is to transmit to the student fundamental on differential calculus, topology of real functions of several real variables and their optimization.
-----------	---

Content	<p>Week 1 : 1) Factorial, permutation, combinaison (Reminder) 2) Concept of determinant, properties and computation of a determinant.</p> <p>Week 2 : 1) Definition of a matrix, properties, basic operations. 2) Basic matrix operations.</p> <p>Week 3 : 1) Linear equations, solving methods and interpretations of the solutions. 2) Linear and homogen equations, solving methods and interpretations of the solutions.</p> <p>Week 4 : 1) Eigenvalues and eigenvectors of a square matrix. 2) Diagonalization of a square matrix and quadratic forms</p> <p>Week 5 : 1) Quadratic forms. 2) Several real variables functions – Introduction, domain, limits and continuity.</p> <p>Week 6 : 1) Partial derivatives of a functions of several real variables. 2) Partial derivatives and differential of a functions of multiple real variables.</p> <p>Week 7 : 1) Exam 1. 2) Partial derivatives of parametric and implicate functions.</p> <p>Week 8 : 1) Homogenous functions and Euler formula. 2) Directional derlvative, gradient and contour lines.</p> <p>Week 9 : 1) Contour lines. 2) Second order partial derivative, Schwarz theorem</p> <p>Week 10 : 1) Second order partial derivative of parametric and implicate functions. 2) n.th order partial derivative Taylor and Mc-Laurin formulas.</p> <p>Week 11 : 1) Free extrema of two variables functions. 2) Free extrema of two variables functions.</p> <p>Week 12 : 1) Exam 2. 2) Extrema sub consraints of two variables functions.</p> <p>Week 13 : 1) Extrema sub consraints of two variables functions. 2) Free extrema of multivariate functions.</p> <p>Week 14 : 1) Free extrema of multivariate functions. 2) Extrema sub consraints of multivariate functions.</p>

Theory Topics

Week	Weekly Contents
1	Factorial, permutation, combinaison. Concept of determinant, properties and computation of a determinant.
2	Definition of a matrix, properties, basic operations with matrix.
3	Linear equations, solving methods and interpretations of the solutions.
4	Eigenvalues and eigenvectors of a square matrix. Diagonalization of a square matrix and quadratic forms.
5	Several real variables functions – Introduction, domain, limits and continuity.
6	Partial derivatives and differential of a functions of multiple real variables.
7	Exam 1. Partial derivatives of parametric and implicate functions.
8	Homogenous functions and Euler formula. Directional derlvative, gradient and contour lines.
9	Second order partial derivative, Schwarz theorem.
10	n.th order partial derivative Taylor and Mc-Laurin formulas.
11	Free extrema of two variables functions.
12	Exam 2. Extrema sub consraints of two variables functions.
13	Extrema sub consraints of two variables functions. Free extrema of multivariate functions.
14	Free extrema of multivariate functions. Extrema sub consraints of multivariate functions.
