ECON108	Microeconomics I	2	3	0	0	3	7
Prerequisites							
Admission Requirements							
Language of Instruction							
French							
Course Type							
Compulsory							
Course Level							
Bachelor Degree							
Objective							
The aim of this course is to examine the behavior of consumers and firms, which constitute the basis of microeconomic analysis, and the production and distribution processes of societies. The decision-making mechanisms of consumers and firms, their interactions with each other and their consequences will be analyzed at a basic level.							
Microeconomics I will focus mainly on consumer theory. The last part of the course will be an introduction to producer theory. The economic conditions, preferences and optimal choices of consumers will be discussed and then the effects of changes in economic conditions will be discussed. Thus, it will be possible to derive demand functions and understand their properties. In the producer theory section, after discussing the short-run production process and the profit maximization problem, the long-run producer theory will be introduced. The firm's cost minimization and profit maximization problems will be discussed and short-run and long-run supply curves will be derived.							
Content

Theory Topics

Week	Weekly Contents
1	Introduction of the course. Math reminder
2	Economic conditions of the consumer - budget constraints
3	Preferences and indifference curves
4	Different types of preferences
5	Recitation
6	Optimal choice of the consumer
7	Change in economic conditions, substitution and income effects
8	Demand + recitation
9	Midterm exam
10	Consumer surplus and deadweight loss
11	Introduction to the theory of production: short-run production model - single input single output
12	Production with multiple inputs, cost minimization and profit maximization, duality
13	Short- and long- run production decisions
14	Synthesis
