Course Code	Course Name	Semester	Theory	Practice	Lab	Credit	ECTS
INF438	Advanced Databases	7	3	0	0	3	4

Prerequisites	INF324
Admission Requirements	INF324

Language of Instruction	
Course Type	Elective
Course Level	Bachelor Degree
Objective	This course is designed for students with good basis in programming, as well as good knowledge of relational data model, relational algebra and a broad knowledge of the relational DBMS. The objective of this course is to situate and understand the tools of access to relevant information and develop an analytical framework and keys to comprehend the company's needs in a project of Data Warehousing
Content	Week 1. Introduction, basic concepts Week 2. Database's languages and advanced models Week 3. Data types and middle-ware architecture Week 4. Introduction to business intelligence Week 5. Principles and architectures of data warehouses Week 6. Data warehouse modeling Week 7. Basic concepts and application of an ETL tool Week 8. Mid-term Week 9. OLAP cubes concepts Week 10. Querying the OLAP cubes Week 11. Reporting tools Week 12. Introduction to Data Mining Week 13. Basic Association algorithms of DM Week 14. Basic Clustering algorithms of DM

Theory Topics

Week	Weekly Contents
1	Introduction & Basic Concepts
2	Database's languages and advanced models
3	Data types and middle-ware architecture
4	Introduction to business intelligence
5	Principles and architectures of data warehouses
6	Data warehouse modeling

Week	Weekly Contents
7	Basic concepts and application of an ETL tool
8	Midterm exam
9	OLAP cubes concepts
10	Querying OLAP cubes
11	Reporting tools
12	Introduction to Data Mining
13	Basic Association Algorithms of DM
14	Basic Clustering Algorithms of DM
