Course Code	Course Name	Semester	Theory	Practice	Lab	Credit	ECTS
MATH 501	Advanced Analysis	1	3	0	0	3	8

Prerequisites	
Admission Requirements	

Language of Instruction	Turkish	
Course Type	Compulsory	
Course Level	Masters Degree	
Objective	The course aims to cover some parts of the content of Mat 101,102, 201, 202, 301,331 and 452 given in the undergraduate level at Galatasaray University. We try to understand definitions, theorems, and proofs of some results in Real Analysis. We don't prove everything but will try to get a deeper understanding and hope to consolidate your understanding in Real Analysis.	
Content	 Sets, finite and infinite sets, countability. Interchange of Limits, Pointwise Convergence, Uniform Convergence Riemann Integral Metric Spaces, Open/Closed sets, Compactness, Completeness, Examples: C(S) and B(S) Riemann Integral for several variable functions, Fubini's theorem. Lebesgue Outer measure. Mesaurable sets in R, then in R^n Measurable Functions Completion of a Measure space Lebesgue Integral Properties of Lebesgue Integral Comparison of Riemann and Lebesgue Integrals, Convergence Theorems Lebesgue Integral in R^n, Fubinis'theorem for Lebesgue Integral L'p spaces, Convolution Jordan and Hahn Decompositions, Radon-Nikodym Theorem

Theory Topics

Week	Weekly Contents	
1	Finite and infinite sets, countability.	
2	Interchange of Limits, Pointwise Convergence, Uniform Convergence	
3	Riemann Integral	
4	Metric Spaces, Open/Closed sets, Compactness, Completeness, Examples: C(S) and B(S)	
5	Riemann Integral for several variable functions, Fubini's theorem.	
6	Lebesgue Outer measure. Mesaurable sets in R, then in R^n	
7	Measurable Functions	
8	Completion of a Measure space	
9	Lebesgue Integral	
10	Properties of Lebesgue Integral / Midterm	

Week	Weekly Contents	
11	Comparison of Riemann and Lebesgue Integrals, Lebesgue Convergence Theorems	
12	Lebesgue Integral in R^n, Fubinis'theorem for Lebesgue Integral	
13	L^p spaces, Convolution	
14	Jordan and Hahn Decompositions, Radon–Nikodym Theorem
