ECON311	Game Theory	5	3	0	0	3	5

Prerequisites	
Admission Requirements	

Language of Instruction	Turkish
Course Type	Compulsory
Course Level	Bachelor Degree
Objective	This course aims to provide basic knowledge and familiarity with the concepts and methods in game theory, which is of importance in natural and social sciences. Another objective is to enable the students to implement game theoretic reasoning to economic and social issues.
Content	This course offers an overview of the principal solution concepts and applications of game theory. Game theory is widely used in social sciences to analyse strategic interactions in a variety of contexts. The actions taken by others, competitors, buyers, suppliers, regulators and such, affect companies' market and non-market opportunities. When making decisions companies thus need to anticipate the actions taken by others. Game theory is a methodological tool best suited at analysing such interactions. The course consists of two parts. First, it introduces the principal solution concepts used in game theoretical models (dominance, Nash equilibrium concept, sub-game perfection and sequential equilibria), then it studies applications of game theory in a number of areas, such as bargaining, signaling, spatial models.

Theory Topics

Week	Weekly Contents
1	Introduction and examples
2	Static games under perfect information-Representation by normal form
3	Dominant strategy equilibrium and Rationalization
4	Variable sum games and pure strategy Nash equilibrium
5	Nash equilibrium applications
6	Mixed strategy Nash equilibrium-Applications
7	Static games under imperfect information-Asymmetric information
8	Dynamic games under perfect information-Dynamic games under perfect and complete information-Extensive form games-Backward induction
9	Credibility-Commitment
10	Dynamic games under complete and imperfect information-Subgame perfect equilibrium-Applications
11	Bayesian games-Bayesian Nash equilibrium
12	Perfect Bayesian equilibrium
13	Signalling games and applications
14	Signalling games and applications
