Course Code	Course Name	Semester	Theory	Practice	Lab	Credit	ECTS
INF324	Relational Databases	5	2	0	2	3	4

Prerequisites	
Admission Requirements	

Language of Instruction	French
Course Type	Compulsory
Course Level	Bachelor Degree
Objective	<p>The objective of this course is to present an overview of the principles and the current techniques in relational databases subject. The course focuses on the modeling of data and the desing of a database in the context of DBMS SQL Server 2008</p> <p>Another secondary objective of the course is the development of student autonomy in the use of database management system. This is a reflection of the reality of the labor market data and student are encouraged to respond positively to seeing the opportunity to enhance their knowledge of the DBMS.</p>
Content	<p>Week 1. Introduction, properties and classification of DBMS, fundamental concepts</p> <p>Week 2. Entity-relationship model: entity, association and attribute</p> <p>Week 3. Relational model, normalization of a relationship</p> <p>Week 4. Functional dependencies and normal forms</p> <p>Week 5. Integrity constraints</p> <p>Week 6. Relational Algebra</p> <p>Week 7. RA Expressions + SQL</p> <p>Week 8. SQL</p> <p>Week 9. Aggregate and complex queries</p> <p>Week 10. Midterm</p> <p>Week 11. Administration of transactions, Isolation Level</p> <p>Week 12. Triggers and Stored Procedures</p> <p>Week 13. Optimisation and Indexing</p> <p>Week 14. Recovery and Security</p>

Theory Topics

Week	Weekly Contents
1	Introduction, properties and classification of DBMS, fundamental concepts
2	Entity-relationship model: entity, association and attribute
3	Relational model, normalization of a relationship
4	Functional dependencies and normal forms
5	Integrity constraints
6	Relational Algebra
7	Midterm
8	SQL Queries

Week	Weekly Contents
9	Aggregate and complex queries
10	Functions, Triggers and Stored Procedures
11	Transaction Management
12	Isolation Level
13	Optimisation and Indexing
14	Database Tuning
