Type de Cours	Obligatoire
Niveau du Cours	Master
Objectif du Cours	Introduce current aspects of the design and the implementation of computing systems that can process, understand, or communicate in human language. The course covers fundamental approaches, largely machine learning and deep learning, used across the field of NLP as well as a comprehensive set of NLP tasks both historical and contemporary. Problems range from syntax (part-of-speech tagging, parsing) to semantics (lexical semantics, question answering, grounding) and include various applications such as summarization, machine translation, information extraction, and dialogue systems. Assignments throughout the semester involve building scalable machine learning systems for various NLP tasks. Suggested Background: Data Structures and Algorithms, Linear Algebra, Introduction to Artificial Intelligence-Machine Learning .
Contenus	Week 1: Introduction to NLP, Regex, Finite State Machines, Edit Distance Week 2: Finite State Transducers, Text Normalization, Week 3: Language models, tf-idf, bag of words, n-grams Week 4: Lexical, syntactic and morphological analysis Week 5: Semantic analysis Week 6: Text classification, text summarization Week 7: Machine translation, Q&A Systems, Chatbots Week 8: Speech Analysis Week 9: Neural Nets, Embeddings Week 10: Deep Learning and Language Models Week 11: Projects
