Niveau du Cours	Licence
Objectif du Cours	<p>The general objective of the course is to provide a better understanding of transformation in the global economy and European Union's strategies and policies on increasing the competitiveness of EU in this new era of world history. Regarding this general objective the course will have three modules and related specific objectives with each module.</p> <ul style="list-style-type: none"> • Module one aims to provide the historical progress of change and influence of digitization on economic and social life and the current transformation and drivers and trends shaping the change in the economic life like eco-innovation, aging and other grand societal challenges, • Module two aims to provide a better understanding about the European Economic Integration, EU's positioning in digital economy, EU's policies and strategies on industrial policy, development policy, cohesion policy, taxation policy and other legal issues to take a leading role in digitization in the economy, • Module three aims to provide students to understand the distinction between traditional old and digital new structures in terms of business models <p>In the first module's sessions, the students will be introduced the concepts of economic change regarding to digitization in global level and the history of transformation. The module will include a transformation part explaining the new vs. old consumer, producer and government and the dimensions of digital change effective on economic and social relations. In this module, the content will also focus on the major game changer technologies and drivers of digitization and trends related to these drivers.</p> <p>In the second module's sessions, the students will be introduced a further understanding about the history of European economic integration, the dynamics and evolution in the European economy, Science, Technology and Innovation Policies of European Union, Industrial Policy of European Union and other technical regulations regarding to taxation, intellectual property rights, infrastructure etc.</p> <p>In the third module the sessions will focus more on impact of digitization in the supply-side of economics. The focus will be on manufacturing industries and service industries and the relationship between the previous module with these industries will be built. The students will be able to analyse and learn about the digitization and its impacts on industries in applied level. Module four will be a case study module which students and lecturers will jointly discuss and focus on industry specific or policy specific cases..</p>
